UniHub

Testing Guide - on your phone
App version 0.2.30

Every test is a short list of taps with what you should see. Tick **OK** or **Problem** under each one. When you find a problem, write one line about it and send me the list (a screenshot helps a lot).

Part	What it covers	Time
1	Install the app and get ready	10 min
2	Signing up and signing in	20 min + 25 min wait
3	The student side: feed, event page, tickets	25 min
4	Organizers: applying, creating events, campus events	30 min
5	Notifications	15 min + waiting
6	After the event: past tickets, reviews, statistics	25 min
7	Admin: roles, reports and case files	25 min
8	Admin: suspending, removing and blocking	30 min
9	Teams: helpers who scan and edit	30 min
10	The yearly check of university emails	15 min
11	Profile, looks, the website on a PC, deleting an account	20 min
12	If something goes wrong	as needed

Note: Words in `this style` are things you type exactly. Words in **bold** are buttons or tabs you tap.

Tip: Already tested Parts 1 to 6 with an older version? You do not need to start over. Install this version and redo only the tests marked **(changed)** or **(new)** in Parts 4 and 6, then continue with Part 7.

Part 1 - Install the app and get ready

1A. Install the newest version

The newest app file is `D:\UniHub_APK\UniHub-v0.2.30.apk`. Ignore the older files in that folder.

1. Copy the file to your phone: USB cable (choose **File transfer** on the phone, copy it into **Download**) or Google Drive. Do not email it: Gmail blocks .apk files.
2. On the phone open the **Files** app > **Downloads** and tap the file.
3. If Android asks, allow installing from this source. If Play Protect warns you, tap **More details** > **Install anyway** (it does that for every app that is not from the Play Store).
4. Tap **Install**. It updates the old UniHub and keeps you signed in. Only if it says *App not installed*: uninstall the old UniHub first, then install again.

1B. The accounts in this guide

You play several people on one phone by signing out and in again. Gmail ignores everything between **+** and @, so all codes for the + addresses arrive in your normal inbox.

Name in this guide	Email	Who it is
Admin	who649@haw-hamburg.de	You, the platform admin (exists already)
HAW Student	your friend's HAW address	A real university account. Created in Test 2. Later becomes a university organizer.
Test Student	whp2718+student@gmail.com	An account without a university. Later becomes a commercial planner.
Student 2	whp2718+student2@gmail.com	A second account without a university, for looking and reporting
Throwaway	whp2718+gone1@gmail.com, +gone2 ...	Short-lived accounts for delete/remove tests

Warning: Codes for the HAW address arrive in **your friend's inbox**, not yours. He has to send you the code each time (sign-up in Test 2, and the yearly check in Part 10). Codes run out after a short time, so do those tests when he is reachable.

Note: Only university accounts can register for events. In this guide that is the **Admin** and **HAW Student**. The Gmail accounts can look at public events, report them and become organizers, but cannot get tickets.

Tip: Write the passwords on paper. To **sign out**: tap your name at the top right > **Sign out**. To **sign in**: tap **Sign in / Sign up**, type email and password. If an account from an older round of testing still exists, just sign in instead of creating it.

Note: Some tests need a **second phone** (a friend's) or a **computer screen**. They say so at the top. Skip them if you can't do them now.

Part 2 - Signing up and signing in

Test 1 - Create the Test Student account (Gmail)

1. Sign out. Tap **Sign in / Sign up** > **New here? Create an account**.
2. Name `Test Student`, email `whp2718+student@gmail.com`.
3. Under the email it says *No university email detected* and that only university accounts can register for events (correct for Gmail).
4. Type a password of 8+ characters. In **Password again** type something different and tap **Create account**: a red message says the two passwords are not the same. Correct it and tap again.
5. Check the screen **Check your email**: it has one box, **Code from your email**, and a grey note that you have **20 minutes**.
6. Type the 6-digit code from Gmail and tap **Verify**.

You should see: you are signed in; the bottom bar shows **Home**, **My Tickets**, **Profile**.

☐ OK ☐ Problem, what happened: _____

Test 2 - Create the HAW Student account (university email)

1. Sign out. **Sign in / Sign up** > **New here? Create an account**.
2. Name `HAW Student`, email: your friend's HAW address, a password (twice).
3. Under the email it now says *University account detected* with the university's name. Tap **Create account**.
4. Ask your friend for the code from his HAW inbox, type it and tap **Verify**.
5. Open **Profile** and find the row with the university's name.

You should see: you are signed in. The university row has a green tick and says *Set automatically from your verified university email.*

☐ OK ☐ Problem, what happened: _____

Test 3 - Looking around without an account

1. Sign out. On the sign-in screen tap **Browse events without an account**.
2. Scroll the list. Tap any event.
3. Tap **Not now**, then tap **Sign in / Sign up** at the top.

You should see: you see **Public events** only (no campus events). Opening an event asks you to sign in first (*Sign in to see this event*).

☐ OK ☐ Problem, what happened: _____

Test 4 - Unfinished sign-ups free the email again (needs a 25-minute wait)

1. Sign out. Start a sign-up with `whp2718+ghost@gmail.com`, but **do not** type the code. Close the app.
2. Do other tests for **25 minutes**. (The server deletes sign-ups whose code was never entered after 20 minutes.)
3. Sign up again with exactly the same email and any password.
4. A **new** code email arrives. Type it in.

You should see: the second sign-up works normally and you are signed in.

☐ OK ☐ Problem, what happened: _____

Test 5 - Coming back before the 20 minutes are up

1. Sign out. Start a sign-up with `whp2718+back@gmail.com` and close the app without the code.
2. Within 20 minutes open the app and **sign in** with that email and password.

You should see: the app sends a new code and opens the code screen by itself. Type it: you are in.

☐ OK ☐ Problem, what happened: _____

Test 6 - Forgot password

1. Sign out. Tap **Sign in / Sign up** > **Forgot password?**
2. Type `whp2718+student@gmail.com` and tap **Send code**.
3. Type the code from Gmail and a **new** password in both boxes. Confirm.

You should see: you are signed in and a green message says *Your password was changed. You are signed in.* (Write it down!)

☐ OK ☐ Problem, what happened: _____

Test 7 - Forgot password, but typing the old password

1. Sign out > **Forgot password?** > same email > **Send code** (wait a minute if it asks you to).
2. Type the code and, in both boxes, the password the account **already has**. Confirm.

You should see: no error. You are signed in and the message says *That is the password you already had, so nothing changed.*

☐ OK ☐ Problem, what happened: _____

Test 8 - Wrong password and too many codes

1. Sign out and sign in as Test Student with a wrong password.
2. On the code screen of any sign-up, tap **Resend code** twice quickly.

You should see: *Wrong email or password* for the first; for the second a message asks you to **wait a minute** before asking for another code. (Both are meant to be like this. After very many wrong passwords in a few minutes the server also blocks further tries from your connection for a while.)

☐ OK ☐ Problem, what happened: _____

Part 3 - The student side

Sign in as **HAW Student** for this part unless a test says otherwise.

Test 9 - The home feed (new ticket look)

1. Open **Home**. At the top it greets you: **Hi HAW**.
2. Look at the events: each one is drawn like a **ticket**, with a coloured edge for its category and small typewriter-style labels for date and place.
3. Swipe the chip row left and tap **Other**: a list of more categories opens. Tap **All** to go back.
4. Tap the **magnifying glass**, type part of an event name. Then type `zzz`.

You should see: matching events stay; for zzz a message that no events match your search. Tap **X** to close the search.

☐ OK ☐ Problem, what happened: _____

Test 10 - Saving events (heart)

1. Tap the **heart** on an event. The heart turns red.
2. Tap the **heart at the top** (next to the magnifying glass): only saved events show.
3. Close the app completely, open it again.

You should see: the heart is still red (it is saved online). Tap the top heart again to see everything.

☐ OK ☐ Problem, what happened: _____

Test 11 - The event page and the poster

1. Open any upcoming event that has a poster.
2. Check that you see the **whole poster**, not a cut-off part of it.
3. Check: the **heart sits next to the event title** (not in the top corner), date and place, the organizer under **Hosted by**, a small line **POSTED ON** with the date the event was created, and for events with a limit a line like *3 of 50 seats taken*.
4. Tap the poster: it **grows smoothly** to full size and the page behind it turns **frosted** (blurred), not black. Pinch to zoom. Tap outside or **Close**.
5. If the event has **Contact & links**, tap each one: browser, mail app, phone dialer.

You should see: everything is readable in light and dark mode, nothing overlaps, and there is no separate 'enlarge' button in the top corner any more.

☐ OK ☐ Problem, what happened: _____

Test 12 - Register: ticket and bright QR code

1. On an event that is **not** yours, tap **Register** at the bottom.
2. The button turns into **Registered**.
3. Open **My Tickets**. The ticket shows the date, the place and a QR code.
4. Tap the **QR code**.

You should see: it opens full screen on white and the screen goes to **full brightness**. Close it: the brightness goes back to what it was.

☐ OK ☐ Problem, what happened: _____

Test 13 - Accounts without a university email can look, but not register

1. Sign in as **Student 2** (Gmail; create it now if needed). Open any public event.
2. Look at the bar at the bottom of the event page.
3. Open **Profile** and read the university row.

You should see: the bar says **University accounts only** with the explanation that only accounts with a university email can register; the button is grey. The profile row says the same. Saving with the heart and reporting still work.

☐ OK ☐ Problem, what happened: _____

Test 14 - Cancel a registration

1. In **My Tickets** tap **Cancel registration** on that ticket > **Yes, cancel**.

You should see: *Registration cancelled.* The ticket disappears. The event shows **Register** again.

☐ OK ☐ Problem, what happened: _____

Register again for that event before you continue - the next parts use it.

Part 4 - Organizers: applying, creating events, campus events

Test 15 - A Gmail account can only apply for public events

1. As **Test Student**: **Profile** > **Become an organizer**.
2. Look at the two choices at the top. **University organizer** is grey with the note *You need a university email address to become a university organizer.* **Commercial / public events** is selected.
3. Tap **Send request** straight away: red messages ask for position, phone and the tick box.
4. Fill in club name `Test Events Club`, position `Chair`, phone `+49 40 1234567`.
5. Tap **Add document** and pick a photo or PDF (max 5 MB).
6. Tick the box and tap **Send request**.

You should see: *Request sent*; the Profile card says your request is waiting for review.

☐ OK ☐ Problem, what happened: _____

Test 16 - The HAW account applies as a university organizer

1. Sign in as **HAW Student** > **Profile** > **Become an organizer**.
2. This time **University organizer** can be chosen. Leave it selected.
3. Fill in club name `HAW Test Club`, position `Member`, phone `+49 40 7654321`, tick the box, **Send request**.

You should see: *Request sent*.

☐ OK ☐ Problem, what happened: _____

Test 17 - Admin approves both (with the 'permanent address' box)

1. Sign in as **Admin** > **Admin** tab > **Requests**.
2. On Test Events Club check: position, phone (tap = dialer), email, and a chip **Document 1** (tap = opens it). Tap **Approve**. The dialog has only the note box. Tap **Approve**.
3. On HAW Test Club tap **Approve**. This dialog also has a tick box **Permanent address of an organization (not a person): no yearly email check**. **Leave it empty** (your friend is a person, not an office). Tap **Approve**.
4. Sign in as **HAW Student** and simply **wait up to half a minute** on any screen. Do not reload.
5. Sign in as **Test Student**: the organizer tools are already there.

You should see: for HAW Student, a green message *Your organizer request was approved...* appears by itself and the bottom bar changes to **Dashboard**, **Create Event**, **Scanner**, **Profile**. The tick box only appears for university organizers, never for commercial ones.

☐ OK ☐ Problem, what happened: _____

Test 18 - Create a public event with everything

1. As **Test Student** (now a commercial planner): **Create Event**.
2. Add a poster with **Add poster image**. Title `Big Test Event`, location `Room 1`.
3. Set **Starts** to **2 days from now**. Turn off **No attendee limit**. The capacity is now a **number box** (no slider): type `20`.
4. Clear the box and type `0`: a red message asks for a number from 1 upwards. Type `20` again.
5. Check that the switch **Free unconfirmed seats** appears (it only shows when there is a seat limit). Leave it off.
6. Categories: keep **Sports** selected, tap **Other** and type `Yoga, Gaming, Chess` in **Your own categories**. A red message under the box explains: that makes 4 categories (1 selected above plus 3 of your own), an event can have 3 in total. Remove one so it reads `Yoga, Gaming`.
7. Fill **Contact & links**: website `www.haw-hamburg.de`, an email, a phone.
8. Tap **Publish Event**.

You should see: *Event published.* It appears on the Dashboard. Watch the **Live Preview** update while you type.

☐ OK ☐ Problem, what happened: _____

Test 19 - A campus event only the university can see

1. Sign in as **HAW Student** (organizer view) > **Create Event**.
2. Title `HAW Only Event`, location `Campus`, starts in 3 days.
3. Choose **Official university event** (it says only members of the university can see it). Publish.
4. Sign in as **Admin** (a HAW address) > student view > **Home**: look for HAW Only Event.
5. Sign in as **Student 2** (Gmail) > **Home**: look for it again.
6. Sign out and tap **Browse events without an account**: look for it once more.

You should see: the Admin sees HAW Only Event. The Gmail accounts and the visitor do **not** see it; they still see Big Test Event.

☐ OK ☐ Problem, what happened: _____

Test 20 - Edit an event; the seat limit cannot go below the sign-ups

1. As **Test Student**: **Dashboard** > the **pencil** on Big Test Event. Change the title to `Big Test Event 2` > **Save changes**.
2. Sign in as **HAW Student** and as **Admin** (both in student view: tap your name > **Switch to student view**) and register for Big Test Event 2 with both.
3. As **Test Student** edit the event again and set the capacity to `1` > **Save changes**.
4. Set it back to `20` and save. Then tap your name > **Switch to student view** and open the event.

You should see: the first save says *Event updated.* Capacity 1 is refused: *2 people are already registered. The limit cannot be lower than that.* On your own event the button says **Your event** (grey).

☐ OK ☐ Problem, what happened: _____

Test 21 - Check in a guest with the scanner (needs a second phone or a computer)

1. **Phone A** (or the website on a computer): sign in as **Admin**, student view, **My Tickets**, tap the QR code of Big Test Event 2 so it is big. Leave it open.
2. **Phone B**: sign in as **Test Student** > **Scanner** > choose **Big Test Event 2** at the top > point the camera at the QR.
3. Watch **Phone A** for a few seconds without touching it.
4. Scan the same QR a second time (take a screenshot of it beforehand if you want to try this).

You should see: the scanner shows a green **Access granted** with the name. Within a few seconds Phone A turns **green** by itself: **Checked in**. The second scan says the guest **was already checked in**.

☐ OK ☐ Problem, what happened: _____

Test 22 - The scanner only lists events you can still scan for

1. As **Test Student** open **Scanner** and tap the event box at the top.

You should see: only events **with QR check-in** that are running or still to come (plus ones that ended in the last few hours). No cancelled events, no old ones, and no open-entry events.

☐ OK ☐ Problem, what happened: _____

Test 23 - (new) An event without QR check-in has no QR code

1. As **Test Student** create `Open Door Event` in 3 days and turn **Require QR Code Check-in off**. Publish.
2. Sign in as **HAW Student** (student view), register for it and open **My Tickets**.
3. As **Test Student** open **Scanner** and look for Open Door Event in the event box.

You should see: the ticket shows **Open entry** and *Nothing is scanned at this event. This ticket is your registration; just come along.* There is **no QR code**. The event is not in the scanner's list.

☐ OK ☐ Problem, what happened: _____

Part 5 - Notifications

Push messages go to the account that is **signed in on the phone**. Messages for other accounts are still waiting in their **bell** when you sign in as them.

Test 24 - Allow push messages

1. Sign in as **Test Student**. If Android asks to allow notifications, tap **Allow**.
2. **Profile** > the **Notifications** card.

You should see: the card says *Push messages are on for this device.* (If it says blocked: phone Settings > Apps > UniHub > Notifications > on.)

☐ OK ☐ Problem, what happened: _____

Test 25 - Waitlist: a seat opens up

1. As **Test Student** (organizer view): create an event `Tiny Event` starting tomorrow, capacity `1`, public.
2. Sign in as **Admin** > student view > register for Tiny Event (you get the seat).
3. Sign in as **HAW Student** > student view > register for Tiny Event.
4. HAW Student sees **Waitlisted**; in My Tickets: **ON WAITLIST**.
5. Sign in as **Admin** > My Tickets > **Cancel registration** on Tiny Event.
6. Sign in as **HAW Student** and tap the **bell**.

You should see: a notification **You got a spot!**; HAW Student's My Tickets now has a real ticket with a QR code.

☐ OK ☐ Problem, what happened: _____

Test 26 - Event changed / cancelled messages

1. HAW Student is registered for Tiny Event. Sign in as **Test Student**, edit Tiny Event and change the time.
2. Sign in as **HAW Student**: open the bell, then **My Tickets**.
3. As **Test Student** edit it again > **Cancel event** > **Yes, cancel event**.
4. Sign in as **HAW Student** and open the bell.

You should see: after the change: **Event updated**, and the ticket shows the **new time**. After cancelling: **Event cancelled**, and the ticket is marked cancelled.

☐ OK ☐ Problem, what happened: _____

Test 27 - Changes show up without reloading

1. **Needs two devices** (a second phone, or the website on a computer).
2. Device A: sign in as **HAW Student**, register for one of Test Student's events and stay on **My Tickets**.
3. Device B: sign in as **Test Student**, edit that event and change its time. Save.
4. Do not touch device A. Wait up to half a minute.
5. On device A pull the **Home** list and the **My Tickets** list down with your finger.

You should see: device A shows the new time by itself (the app asks the server every 20 seconds and whenever you come back to it). Pulling down shows the round loading circle and refreshes at once. If pulling down does nothing on a screen, write down which screen.

☐ OK ☐ Problem, what happened: _____

Test 28 - Removing notifications

1. Still in the bell list: swipe one notification to the left or right.
2. Tap the **bin icon** at the top > **Delete all**.

You should see: the swiped one disappears; after Delete all the list is empty. Close and reopen: they stay gone.

☐ OK ☐ Problem, what happened: _____

Test 29 - Reminder push (leave the phone signed in)

1. As **HAW Student** register for an event that starts in 3 to 20 hours.
2. Stay signed in as HAW Student. Wait a bit more than 1 hour.

You should see: a push message **Reminder**: *... starts in N hours.*

☐ OK ☐ Problem, what happened: _____

Test 30 - 'Are you still coming?' (wait 12+ hours, or ask Claude to speed it up)

1. As **HAW Student** register for an event that starts in about **2 days**.
2. Stay signed in. About 12 hours later a push **Still coming?** arrives.
3. Open **My Tickets**: a card **Are you still coming?** sits above the ticket. Tap **Yes, I'm coming**.

You should see: *Thanks! Your seat is confirmed.* and a green **Confirmed** badge on the ticket. (**I can't come** asks first, then frees the seat.)

☐ OK ☐ Problem, what happened: _____

> **Tip:** Don't want to wait 12 hours? Tell me which event, and I can move the registration back in time so the question arrives within 10 minutes.

Part 6 - After the event: past tickets, reviews, statistics

For these you need an event that has already started and ended. Create a short one now:

Test 31 - A short event that ends soon

1. As **Test Student** (organizer view): create `Quick Event`. **Starts**: 5 minutes from now. **Ends**: 20 minutes from now. Turn **Require QR Code Check-in** off and leave **Allow User Reviews** on.
2. Sign in as **HAW Student** (student view) and register for Quick Event. Do the same as **Admin**.
3. Wait until it has ended (about 20 minutes).

You should see: Quick Event is published and both have a ticket.

☐ OK ☐ Problem, what happened: _____

Test 32 - Past tickets fold away, and only for 90 days

1. As **HAW Student** open **My Tickets** after Quick Event has ended.
2. Scroll down to **Past events (...)** and tap it.

You should see: upcoming tickets stay on top; Quick Event is a small card in the folded **Past events** section with a **Leave Review** button. A small note says *Past events stay here for 90 days.* (After 90 days they leave this list; nothing is deleted.)

☐ OK ☐ Problem, what happened: _____

Test 33 - (changed) Leave a review at an event without check-in

1. On Quick Event's past ticket tap **Leave Review**. Read the grey note: this event had no check-in, please review only if you were really there; the review is public and counts in the stars.
2. Give 4 stars and a comment, tick the box that you attended, **Submit Review**.

You should see: a green message; the card now shows that the review was submitted (you can review once). The stars count for the event although nobody was scanned (you see them in the dashboard test below).

☐ OK ☐ Problem, what happened: _____

Test 34 - 'How was it?' invitation (about 1 hour after the end)

1. Stay signed in as **Admin**, who had a ticket for Quick Event and has **not** reviewed it yet.
2. About one hour after the event ended, look at the phone and the bell.

You should see: a message **How was it?** Tapping it opens the review form for that event. It comes only once.

☐ OK ☐ Problem, what happened: _____

Test 35 - (changed) Organizer dashboard: one list, reviews inside each event

1. Sign in as **Test Student** > **Dashboard**.
2. Scroll down slowly. The top part must stay solid: the cards slide **under** it, never through it - in light and dark mode.
3. Find **YOUR EVENTS**. There is only **one** list. Each event shows bars for **Registered**, **Confirmed** and **Came** (or *No sign-ups yet*). There are **no review lists** on the dashboard any more.
4. Tap **Quick Event** and scroll to the bottom of its page.

You should see: the **Event statistics** page: number tiles, attendance bars, **SIGN-UPS PER DAY**, the stars, and a section **REVIEWS** with HAW Student's 4-star review. With more than 20 reviews a button **Show more reviews** appears.

☐ OK ☐ Problem, what happened: _____

Test 36 - (new) Publish a cancelled event again

1. As **Test Student** on the **Dashboard**, find **Tiny Event** (cancelled in Part 5). It now has a **pencil** as well as a red bin.
2. Tap the pencil. Set a new start time in the future. The button at the bottom says **Publish again**. Tap it.
3. Read the dialog (old sign-ups do not come back) and tap **Publish again**.
4. Sign in as **HAW Student**: look for Tiny Event on **Home** and in **My Tickets**.

You should see: *Event published.* Tiny Event is online again with the new time. HAW Student sees it on Home with a **Register** button; the old ticket is gone, so they register again if they want to come.

☐ OK ☐ Problem, what happened: _____

Test 37 - (changed) Delete a cancelled event

1. As **Test Student** open Tiny Event with the pencil > **Cancel event** > **Yes, cancel event**.
2. On the **Dashboard** tap the red **bin icon** on Tiny Event. Published events have none.
3. Read the warning > **Delete event**.

You should see: *Event deleted.* It is gone from the dashboard, together with its sign-ups, tickets and reviews. (An event with reports an admin has not decided yet cannot be deleted or published again; the app says so.)

☐ OK ☐ Problem, what happened: _____

Part 7 - Admin: roles, reports and case files

Test 38 - University roles only for university emails

1. Sign in as **Admin** > **Admin** > **Users**. Search `Student 2` (a Gmail account).
2. Tap the **person-with-gear icon** on the card and read the menu.
3. Close it. Search **HAW Student** and open the same menu.
4. Find your own card.

You should see: for the Gmail account the menu has **no** *University organizer* and no *University admin*, and a grey line says *University roles need an account with a university email.* For HAW Student both roles are there. Your own card has no gear icon (you can't lock yourself out).

☐ OK ☐ Problem, what happened: _____

Test 39 - Change someone's role (with a confirmation)

1. On **Student 2**: gear icon > **Commercial planner**.
2. A dialog **Change role?** opens: it names the person, their email, *from Member to Commercial planner* and says in one sentence what the new role allows. Tap **Cancel** once and check that nothing changed.
3. Do it again and tap **Change role**. Then set it back to **Member** the same way (the basic role is called Member for accounts without a university, Student for university accounts).
4. On **HAW Student** pick **University admin** and look at the dialog, then tap **Cancel**.

You should see: a role never changes with one tap. After confirming, a message says the role was changed and the line under the name is updated. For the two admin roles the confirm button is **red**.

☐ OK ☐ Problem, what happened: _____

Test 40 - Several people report the same organizer

1. As **Test Student** (organizer view) create a second public event `Second Test Event` in 4 days.
2. Sign in as **Student 2**: open **Big Test Event 2** > **three dots** (top right) > **Report event** > **Spam or advertising**, type `test report one` > **Send report**.
3. Still as Student 2: report **Second Test Event** with **Wrong or misleading information**.
4. Sign in as **HAW Student** (student view): report **Big Test Event 2** with **Scam or fake event**, text `test report two`.
5. Try to report the same event again as HAW Student.

You should see: each report says *Thank you. An admin will look at it.* The repeat says *You already reported this event.*

☐ OK ☐ Problem, what happened: _____

Test 41 - Reports are stacked by organizer

1. Sign in as **Admin** > **Admin** > **Reports (3)**.
2. Look at the card for **Test Student**.

You should see: one card for the organizer with an orange **3 open** and the line **3 REPORTS ON 2 EVENTS**. Inside: Big Test Event 2 with its two reports, Second Test Event with one. You never see **who** reported. The card has a button **Suspend organizer** (used in Part 8).

☐ OK ☐ Problem, what happened: _____

Test 42 - Dismiss the reports of one event

1. Under **Second Test Event** tap **Dismiss** > **Dismiss**.

You should see: *Report dismissed.* That event now says **Dismissed** and stays online. The card shows **2 open**.

☐ OK ☐ Problem, what happened: _____

Test 43 - Remove a reported event and find the case file

1. Under **Big Test Event 2** tap the red **Remove event**. Read the warning, type the reason `Test: advertising only` and tap **Remove event**.
2. At the top right of the Reports tab tap **Case files**.
3. Tap the entry **Big Test Event 2** to open it. Tap **Copy as text** and paste it into a note or WhatsApp.

You should see: *Event removed.* Both reports about it are closed in one go. The case file says **Event removed**, **2 reports**, names the organizer and their email, your reason, and lists both reports with reason, text and time - but not who sent them. The pasted text contains the same.

☐ OK ☐ Problem, what happened: _____

> **Warning: Remove event** cancels an event for everyone and can't be undone. Only use it on events you made for testing.

Test 44 - Remove a review (admin)

1. As **Admin** open the **Dashboard**, tap **Quick Event** and scroll to **REVIEWS**.
2. Tap the red **bin** next to HAW Student's review > **Remove review**.

You should see: *Review removed.* It is gone from the list and no longer counts in the stars. (Only admins see the bin.)

☐ OK ☐ Problem, what happened: _____

Part 8 - Admin: suspending, removing and blocking

Suspending is the step **before** removing: it can be undone. Use it while you look into reports.

Test 45 - Suspend an organizer (a reason is required)

1. First sign in as **HAW Student** (student view) and register for **Second Test Event** (so somebody holds a ticket).
2. Sign in as **Admin** > **Admin** > **Reports** > on Test Student's card tap **Suspend organizer**.
3. Read the dialog. The orange **Suspend** button is **grey** while the reason box is empty.
4. Type `Test: checking three reports` and tap **Suspend**.
5. Open **Users** and find Test Student.

You should see: *Test Student is suspended*. The report card shows a red **Suspended** label and the button now says **Reinstate**. In Users the line under the name ends with a red **Suspended**.

☐ OK ☐ Problem, what happened: _____

Test 46 - What everyone else sees during a suspension

1. Sign in as **Student 2** > **Home**: look for Second Test Event.
2. Sign out > **Browse events without an account**: look for it again.
3. Sign in as **HAW Student** (who has a ticket for it) and open **My Tickets**.

You should see: Test Student's events are **gone from the feed** for other people and for visitors. Tickets people already have are still there.

☐ OK ☐ Problem, what happened: _____

Test 47 - What the suspended organizer sees

1. Sign in as **Test Student**.
2. Look at the top of the app, then tap the **bell**.
3. In organizer view open **Create Event** and try to publish a new event.
4. On the **Dashboard** try to delete a cancelled event, if there is one.

You should see: a **yellow bar** written for organizers: *... your events are hidden, and you cannot publish, edit or scan. Nothing has been deleted.* The bell has **Account suspended** (also as a push message). Publishing and deleting are refused.

☐ OK ☐ Problem, what happened: _____

Test 48 - Reinstate, and the record of it

1. Sign in as **Admin** > **Admin** > **Users** > gear icon on Test Student > **Reinstate**.
2. Type `Test: reports were unfounded` (optional) and tap **Reinstate**.
3. Open **Reports** > **Case files**.
4. Sign in as **Test Student**, or just wait half a minute if it is open on another device. Check **Home** as Student 2.

You should see: *Test Student is reinstated*. The case files have two new entries: **User suspended** (orange, with your reason and the reports) and **User reinstated** (green). For Test Student the yellow bar is gone and the bell says **Account reinstated**. The events are back in the feed.

☐ OK ☐ Problem, what happened: _____

Test 49 - Suspending a student, and the safety rules

1. As **Admin** > **Users**: open the gear menu on another **admin** account, if there is one.
2. Suspend **HAW Student** (any reason). Open the gear menu again and try to give the account another publishing role.
3. Sign in as **HAW Student**: read the yellow bar, then in student view try to **Register** for an event.
4. Sign in as **Admin** and **Reinstate** HAW Student.

You should see: admin accounts have no **Suspend** and no **Remove user** item. Changing the role of a suspended account fails with a red message. HAW Student's yellow bar is the one for students (*... cannot register for events, write reviews or report events. Tickets you already have stay valid.*) and registering says *Your account is suspended, so this is not possible right now.*

☐ OK ☐ Problem, what happened: _____

Test 50 - Remove a user, with photo and block

1. Create `whp2718+gone1@gmail.com` (name `Gone One`). As Admin give it the role **Commercial planner**.
2. Sign in as Gone One > **Profile** > add a profile photo. Create one public event and publish it.
3. Sign in as **Admin** > **Users** > gear icon on Gone One > **Remove user** (red).
4. Read the dialog: it says **1 event** will be deleted too. Tick **Block this email address from signing up again** and tap **Remove user**.
5. Open **Reports** > **Case files**.

You should see: *Gone One was removed*; the person and the event are gone from the lists. The case files have a new entry **User removed** with **Address blocked**; it says nobody had reported this account. Tell me when you did this test and I will check that the photo file was deleted on the server too.

☐ OK ☐ Problem, what happened: _____

Test 51 - A blocked address cannot sign up

1. Sign out. Try to sign up again with `whp2718+gone1@gmail.com`.

You should see: a message that this email address can't be used to sign up.

☐ OK ☐ Problem, what happened: _____

Test 52 - Unblock an address

1. Sign in as **Admin** > **Users** > **Blocked addresses** (under the search box).
2. The list shows whp2718+gone1@gmail.com with the date and your name. Tap **Unblock** > **Unblock**.
3. Sign out and sign up with `whp2718+gone1@gmail.com` again.

You should see: *... is unblocked*, the list is empty, and the sign-up works (a brand-new, empty account).

☐ OK ☐ Problem, what happened: _____

Test 53 - Unconfirmed label

1. Start a sign-up with `whp2718+gone2@gmail.com` but don't enter the code.
2. Within 20 minutes, as **Admin** > **Users**, find it.

You should see: the new account shows an orange **Email not confirmed**.

☐ OK ☐ Problem, what happened: _____

Part 9 - Teams: helpers who scan and edit

An organizer can invite other accounts to help: to **scan tickets** at the door, to **create and edit events**, or both. The events stay the organizer's. In this part **Test Student** (commercial planner) is the organizer and **Student 2** the helper. Two devices make it much easier.

Test 54 - Invite a helper

1. Sign in as **Test Student** > **Profile** > **Team**.
2. Under **MY TEAM** type `whp2718+student2@gmail.com`. Leave **Scan tickets** ticked, leave **Create and edit events** empty. Tap **Send invitation**.
3. Now type an address that has no account, e.g. `nobody12345@gmail.com`, and send again.
4. Untick both boxes.

You should see: both times the same message: *If this address has a UniHub account that can join your team, it now has an invitation.* (On purpose: the box does not reveal who has an account.) Only Student 2 appears in the list, with an orange **Invited** label and **1 OF 15 PEOPLE**. With both boxes empty the button is grey.

☐ OK ☐ Problem, what happened: _____

Test 55 - Accept the invitation

1. Sign in as **Student 2**. Tap the **bell**: there is a **Team invitation** from Test Student. Tap it.
2. (Or: **Profile** > the Team row, which shows **1 team invitation**.)
3. Under **TEAMS I HELP** tap **Accept**.

You should see: *You joined the team.* The card now shows **SCAN TICKETS**, a **Scan tickets** button and **Leave team**. There is no **Events** button, because that permission was not given.

☐ OK ☐ Problem, what happened: _____

Test 56 - Scan as a helper (needs a second device)

1. As **Test Student** make sure there is an upcoming event **with** QR check-in, e.g. Second Test Event.
2. Device A: sign in as **HAW Student** (student view), register for that event, open the big QR code.
3. Device B: sign in as **Student 2** > **Profile** > **Team** > **Scan tickets**. The title names Test Student; the event box lists only Test Student's events. Scan the code.
4. Sign in as **Test Student** > **Dashboard** > scroll to the recent scans.

You should see: Student 2 gets the green **Access granted**; device A turns green. The organizer's dashboard shows the scan. Student 2 has **no** dashboard, guest list or statistics of Test Student.

☐ OK ☐ Problem, what happened: _____

Test 57 - Give the helper the right to edit

1. As **Test Student** > **Profile** > **Team**: on Student 2's card tap the chip **Create and edit events** so it is selected.
2. Try to switch **both** chips off.

You should see: the chip is selected at once. The last remaining chip cannot be switched off (remove the person instead).

☐ OK ☐ Problem, what happened: _____

Test 58 - Create and edit as a helper

1. Sign in as **Student 2** > **Profile** > **Team**: there is now an **Events** button. Tap it.
2. Tap the pencil on an event, change the location, **Save changes**. Check: there is **no Cancel event** button.
3. Tap **New event**, fill in `Helper Event` in 5 days, publish.
4. Sign in as **Test Student** > **Dashboard**.

You should see: the edit is saved. **Helper Event** is published under **Test Student's** name (look at *Hosted by* on the event page) and appears on Test Student's dashboard, where only Test Student can cancel or delete it.

☐ OK ☐ Problem, what happened: _____

Test 59 - Warning before publishing the same event twice

1. As **Student 2** > Team > **Events** > **New event**: use the title `Helper Event` again and the **same day**. Tap **Publish Event**.
2. Read the dialog and tap **Cancel**.

You should see: a dialog **This event may already exist** names the existing event and its date and offers **Publish anyway**. After Cancel nothing was published.

☐ OK ☐ Problem, what happened: _____

Test 60 - Two people editing the same event (needs two devices)

1. Device A: **Test Student** > Dashboard > pencil on Helper Event. Device B: **Student 2** > Team > Events > pencil on Helper Event.
2. Wait up to 15 seconds and look at the top of both forms.
3. On device A change the title to `Helper Event A` and tap **Save changes**.
4. On device B change the description and tap **Save changes**.

You should see: a yellow bar on both: *... also has this event open for editing right now.* Device A saves normally. Device B gets **Someone changed this event**: its changes are **not** saved and the title from device A stays. After closing and reopening, device B can edit again.

☐ OK ☐ Problem, what happened: _____

Test 61 - Remove a helper, and leaving

1. As **Test Student** > Team: tap the red icon on Student 2 > **Remove**.
2. Sign in as **Student 2** > Profile > Team.
3. (Optional) Invite Student 2 again, accept, then as Student 2 tap **Leave team**.

You should see: *Removed from the team.* Student 2's team list is empty and the scan and events buttons are gone at once. Leaving works the same from the helper's side.

☐ OK ☐ Problem, what happened: _____

Test 62 - University teams stay inside the university

1. Sign in as **HAW Student** (university organizer) > Profile > Team.
2. Invite `whp2718+student2@gmail.com` (a Gmail account). Look at the list.
3. Invite `who649@haw-hamburg.de` (the Admin, a HAW address). Look at the list.

You should see: both times the same message, but only the **HAW** address appears in the list. A university organizer's team can only have people from the same university.

☐ OK ☐ Problem, what happened: _____

> **Note:** A suspended helper cannot scan or edit, and a suspended organizer pauses the whole team: the helper's card then says *This team is paused at the moment*. You can try this with the Suspend button from Part 8.

Part 10 - The yearly check of university emails

Once a year every university account is asked to prove that its address still works, by typing in a code sent to it. Whoever does not do it within 30 days keeps the account but loses the university (and an organizer becomes a normal student). Nobody is due for a year, so for this part **ask Claude first**:

> **Note:** Tell Claude: *"Make HAW Student due for the yearly check."* Claude sets the date back. Your friend must be reachable, because the code goes to his inbox.

Test 63 - The reminder

1. After Claude confirms, sign in as **HAW Student** (close and reopen the app if you were signed in).
2. Look at the top of the app. Open **Profile** and look at the university row.

You should see: a **blue bar**: *Yearly check: please confirm that your university email still works.* with a **Confirm** button. The university row says *Yearly check due. Tap to confirm your email.*

☐ OK ☐ Problem, what happened: _____

Test 64 - Confirm with the code

1. Tap **Confirm** in the blue bar. The dialog names the HAW address. Tap **Send code**.
2. First type a wrong code, e.g. `000000`, and tap **Confirm**.
3. Ask your friend for the code from the email **Your UniHub code**, type it and tap **Confirm**.

You should see: the wrong code says *That code is wrong or has expired.* The right one: *Thank you. Your university email is confirmed.* The blue bar disappears and the university row has its green tick again.

☐ OK ☐ Problem, what happened: _____

> **Warning:** If the email contains a **link** instead of a code, the **Magic Link** email template in the Supabase dashboard was not changed yet. Tell Claude.

Test 65 - Missing the check (ask Claude to fast-forward)

1. Tell Claude: *"Let HAW Student miss the yearly check."* Wait for the confirmation.
2. Sign in as **HAW Student**. Look at the bottom bar, the bell, **Home** and the university row in **Profile**.
3. Tap the university row > **Send code** > type the code from your friend > **Confirm**.

You should see: before confirming: the organizer tabs are gone (a normal member again), the bell says **University access paused**, HAW Only Event is not in the feed, and the row says *Not confirmed this year. Tap to confirm your university email.* After confirming: the university is back and campus events show again. The organizer role does **not** come back by itself.

☐ OK ☐ Problem, what happened: _____

Test 66 - Switch the yearly check off for a permanent address

1. As **Admin** > **Users**: give HAW Student the role **University organizer** again.
2. Gear icon on HAW Student > **Switch yearly email check off**.
3. Look at the line under the name. Then open the gear menu on **Student 2**.
4. On HAW Student: **Switch yearly email check on** again.

You should see: the line shows **No yearly email check**. Student 2 (not a university organizer) has no such menu item. After switching it on, the label is gone.

☐ OK ☐ Problem, what happened: _____

Part 11 - Profile, looks, the website on a PC, deleting an account

Test 67 - The new profile page

1. **Profile**: at the top is your name, email and role, like a member pass. Below, the settings are in groups (**Account**, **Notifications**, **Preferences**, **Privacy & data**).
2. **Edit name**, change it, **Save**.
3. Try the name `Admin` or `UniHub Support` and save.
4. **Change password** (then change it back or write it down).
5. **Language** > **Deutsch**. Look around, then switch back to **English**. Close and reopen the app.

You should see: *Saved.* for a normal name; the official-sounding names are refused: *This name cannot be used. Please choose another one.* The app turns German and back; the language is kept after reopening.

☐ OK ☐ Problem, what happened: _____

Test 68 - Light and dark

1. **Profile** > **Theme Mode**: switch between **Light**, **Dark** and **System**.
2. In dark mode open Home, My Tickets, an event page and the Dashboard.
3. Check that there is **no wallpaper setting** any more.

You should see: navy and white in light mode, dark with readable text in dark mode. Nothing overlaps.

☐ OK ☐ Problem, what happened: _____

Test 69 - The website on a PC (needs a computer)

1. On the PC open PowerShell, type `cd D:\UniHub_v0.2` then `flutter run -d chrome` and wait for the browser.
2. Sign in as Test Student and make the window wide.
3. Look at **Home**, an event page and **Profile**. Then drag the window narrow like a phone.

You should see: wide: a navy menu on the left with written labels, events **two per row**, and a right column with **Your next ticket** and **Saved**. The event page and the profile use two columns and never stretch across the whole screen. Narrow: it looks like the phone app.

☐ OK ☐ Problem, what happened: _____

Test 70 - Delete your own account (Throwaway)

1. Create `whp2718+gone3@gmail.com`. Save one event with the heart.
2. **Profile** > scroll to the bottom > **Delete account**. Type `DELETE` > **Delete forever**.
3. Try to sign in with that email.

You should see: you are signed out; signing in says *Wrong email or password*. (An account that still owns events gets a message to ask an admin instead, **before** anything is deleted.)

☐ OK ☐ Problem, what happened: _____

Part 12 - If something goes wrong

Find what you see in the left column. If it isn't there, send me: the test number, what you tapped and a screenshot.

What you see	What to do
Phone says *App not installed*	Uninstall the old UniHub (long-press the icon > Uninstall), then install again.
Phone blocks the install	Tap **Install anyway** and allow installs from the Files app.
No code email arrives	Wait 2 minutes and check spam. You can ask for a new code once a minute. For the HAW address the email is in your friend's inbox.
That code is wrong or has expired	Use the newest email only. Ask for a new code.
The yearly-check email has a link, no code	The Magic Link template in Supabase still has the old text. Tell Claude.
This email address can't be used to sign up	An admin blocked it. Unblock it in Admin > Users > Blocked addresses.
A yellow bar: *Your account is suspended*	An admin suspended this account. As Admin: Users > gear icon > **Reinstate**.
This event is not available to you	It is a campus event of another university, or its organizer is suspended.
University organizer is missing in the role menu	That account has no university email. Only Commercial planner is possible.
University accounts only instead of Register	That account has no university email. Use Admin or HAW Student to register.
A ticket has no QR code	The event has no QR check-in (open entry). That is intended.
Someone changed this event when saving	A teammate saved first. Close the page, open the event again and redo your change.
The Team buttons are grey / *team is paused*	The organizer or you are suspended, or you are no longer at the organizer's university.
An invited person does not appear in My team	The address has no account, or (university organizer) it is not from your university.
A change doesn't show	Wait up to half a minute, or pull the list down. If it still doesn't show, note the screen.
Events don't load / *Could not load*	Check the phone's internet, pull down to refresh, or close and reopen the app.
No push messages	Profile > Notifications card. If it says blocked: phone Settings > Apps > UniHub > Notifications > on. Remember: push goes only to the account signed in on this phone.
Scanner shows a black screen	Camera permission: phone Settings > Apps > UniHub > Permissions > Camera > Allow.
Scanner says *not allowed to scan*	Only the organizer of that event can check people in (and not while suspended).
Leave Review is missing or refused	The event hasn't started yet, it needs a QR check-in first, or you already reviewed it.

What you see	What to do
That action is not allowed or failed (admin)	Check the internet and try again. Admins can't be suspended or removed until their role is changed to a normal user.
You still own events when deleting your account	Use a fresh Throwaway account, or ask an admin to remove the account.
Admin tab is missing	Only admin accounts have it, in the organizer view: tap your name > **Switch to organizer view**.
Poster upload refused	Use a JPG, PNG or WebP photo under 5 MB.

Words explained

Word	Meaning
Organizer	An approved account that may publish events and check guests in. University organizers need a university email.
Commercial planner	An approved account without a university that publishes public events.
Campus event	An 'official university event': only accounts of that university can see it.
Waitlist	A queue for full events. People move up automatically when someone cancels.
Push message	A notification that pops up on the phone even when the app is closed.
Suspended	Paused by an admin while reports are checked. Nothing is deleted and it can be undone.
Case file	The record of a suspension, reinstatement or removal, with the reports as proof. Kept for 12 months.
Team	People an organizer invited to help. Each may scan tickets, create and edit events, or both.
Open entry	An event without QR check-in: tickets have no code and nothing is scanned.
Yearly check	Once a year a university account proves its address still works by typing in a code.
Platform admin	Can manage everything: requests, reports and all users. University admins only manage their own university.
